

**Brockton High School  
Auditorium and TV Studio Systems Renovation**

**Contract/Bid Number 2080-0005  
Bid RFI -002**

---

**No.    Question**

**General**

Q1    There is a DCAMM requirement list in the RFP. There is no DCAMM category for theatrical system integrator and installers. Will the DAMM requirement be waived so that there can be direct bids.

A1    Because the project exceeds a certain dollar amount the project must be DCAMM certified. We cannot get around this requirement. We encourage interested bidders to team with a DCAMM certified prime contractor

**Auditorium Lighting Systems**

Q2    Device 104 and 108 are labeled as SP2DE on the drawing however they are listed as SP2E on the Theatrical Lighting Device Schedule. Please confirm Device model.

A2    Drawing TL3 and TL4 are correct. Devices 104 and 108 should be SP2DE.

Q3    ETC no longer sells Ion console 512 channel upgrades. The channel upgrade will bring the console to its max output (6K). Please provide the console serial number to verify the max output available and whether the console is eligible for a Windows 7 update.

A3    The existing ETC ION serial no. is 433210550. The school technical director believes that the existing ION is already on Windows 7.

Q4    Section 110640 – 7 2.4 E – says “Provide one master and one slave panel”. There is only one Sensor IQ panel on the drawings and schedules. Please confirm the panel requirements.

A4    Only one master panel should be required.
